

ultrasonix powered by analogic 

SonixTouch Q+

High-Performance Ultrasound System

Excellent Performance. Advanced Workflow. Customizable User Interface.

- High Resolution Imaging
- Advanced Imaging Technologies
- Streamlined Workflow
- Ideal for Interventional Procedures

Maximize your Imaging Performance with Quantum Plus Technology

SonixTouch Q+ is an easy-to-use, fully featured, customizable touch screen ultrasound system incorporating Quantum Plus Technology for excellent image quality.

Advanced 3D/4D Imaging

High resolution single sweep acquisitions can be optimized with an intuitive spline line and saved.

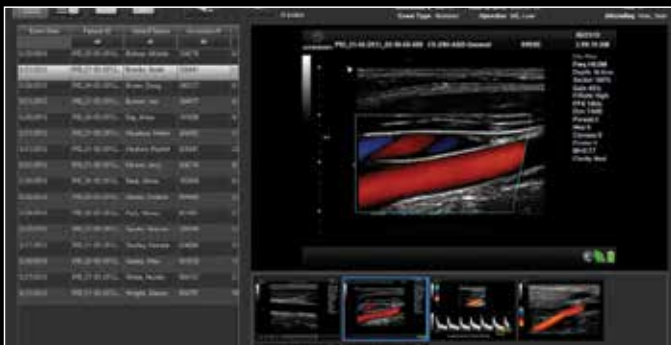

SonixGPS - a Breakthrough in Needle Guidance

See the needle's trajectory in and out-of-plane.

Customizable Touch Screen Console

See only the controls you need.

bkHub - Credentialing and Billing Made Easier

Reduce the time, cost and paperwork in your busy practice.

High Resolution Imaging with Advanced Technologies

- Efficient and fast performance
- High Resolution 19" LED monitor
- Sensitive color Doppler with excellent spatial resolution and sensitivity
- Motion Compensated Angular Compound Imaging (MACI) ensures high quality real-time images
- Advanced imaging modes such as Spatial Compounding, 3D/4D imaging, Panoramic imaging, and Elastography

Innovative Needle Guidance

- SonixGPS* helps improve the speed and accuracy of difficult procedures
- SonixShine needle enhancement technology illuminates needle in-plane with the touch of a button
- Ideal for guiding needle placement during interventional procedures

Flexible and Easy to Use

- Fully programmable touch screen for easy customization
- Double full swivel wheels for easy maneuverability in tight spaces
- Adjustable monitor and console for greater operator comfort
- Easy-to-clean color touch screen with a wide viewing angle for controls at your fingertips

Optimized Workflow and Patient Management

- bkHub** - streamlines credentialing, quality assurance, billing and ultrasound image management
- Barcode reader and wireless access simplifies patient information into and out of the system
- SonixCam - HD recording of complete procedures for educational needs

* SonixGPS is not available in all countries.

**bkHub is used for the purpose of image review and credentialing and is not cleared by the FDA for diagnostic interpretation.

Excellent Performance with Advanced Features

Fetal profile at 34 weeks gestation

Endovaginal image of complicated right ovarian cyst

Membrane in a 22 week twin pregnancy and 4 chamber heart of twin A

Crown rump length at 9 weeks gestation

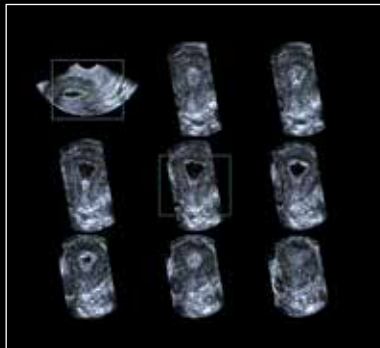

19 week fetal head detail

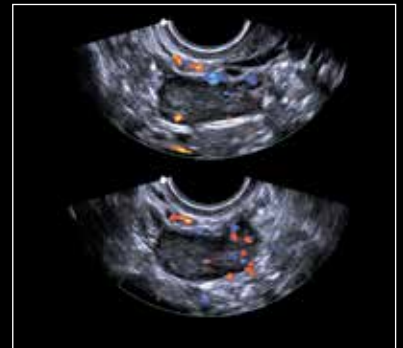

A and VR plane using spline line display of a 19 week fetus

Abdominal aorta, celiac axis, SMA

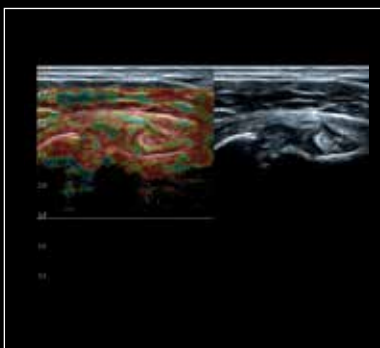

Sonohysterogram multislice imaging

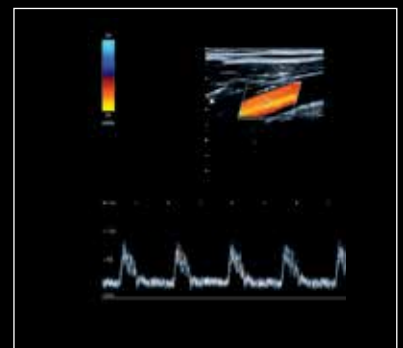

Right ovary dual B imaging with sensitive color flow

Pulsed wave and color Doppler of hepatic veins

Comparative elastography right biceps tendon

Common carotid artery pulsed wave Doppler imaging

The Right Transducer for Every Need
